

IS IT POSSIBLE FOR TELEWORKERS TO DO BUSINESS AND HELP SAVE THE PLANET?

YES IT IS! LET'S SEE HOW TO DO IT...

Let me explain, from GlobalSolidarity.live and Mayday.live, we are working hard so that we all have a chance to save the planet and ourselves from global warming.

As of July 2023, the first catastrophic climate inflection point begins.

We are deploying massive e-commerce and e-business strategies. Our goal is to donate 50% of the net profit to help end hunger, extreme poverty and global warming, inviting multinationals to follow our example for the next 5 years.

Or until the governments decide to approve the Solidarity Green Fund of 2% of the annual world GDP to solve the global crises.

We call on all web designers and programmers to participate in this initiative to help save the Planet.

How to do it?: Providing online expert web services, selling and raising money.

1. 50% of the net profit is donated.
2. 20% is to cover operating, administrative, advertising and reinvestment costs.

3. 30% is redistributed among associated personnel through teleworking.

This is the distribution of profits from the capital obtained once production costs have been discounted.

Each web designer and programmer charges for their services, according to the price list set by GSL Systems and is also a partner in the distribution of the benefits of the capital obtained.

If we cooperate in a coordinated, synchronized and supportive manner, it is possible to advance towards the activation of lucrative business units that have already been proven and compete with advantage.

Everyone must be clear that it is not about doing business as a priority, the essential objective is to work together to help save the planet in the face of this terminal crisis.

The architect Roberto Guillermo Gomes, CEO and leader of this initiative, has publicly promised to receive a monthly salary of US\$3,000 for all his work, updated according to inflation.

All the movements of money, in detail, will be published monthly online in Excel format, so that everyone can control what is done with the money collected. The info will be published at <https://mayday.live/phoenix-retrodata>

Nobody loses. Everyone works, gets paid for their work and at the same time cooperates to help save the planet.
